

Aviation Repair Station 2012

Aviation Repair Station 2012© (ARS 2012) was designed for aviation repair stations with input from aviation repair stations to help aviation repair station grow their business. That's it. Not an ERP solution or an Accounting package that has been modified to try and fit a repair station's needs, but a complete, cost effective solution specifically designed to:

- ◆ Increase Operational Efficiency
- ◆ Reduce Operating Costs
- ◆ Improve Performance
- ◆ Maximize Productivity

The **Work Order Module** allows users to create work orders, enter discrepancies, create tag labels as well as print all work order forms (such as the 8130, EASA and any custom form created for your facility).

The **Administration Module** tracks employees information, and streamlines the creation and maintenance of customer and vendor lists, and maintenance of security protocols.

The **Inventory/Purchasing Module** enables administrators to track inventory items, create purchase orders and maintain shelf life control items.

The **Sales Module** facilitates the creation of completely customized quotes and includes a CRM module to track leads, prospects and clients.

The **Quality Module** supports the creation and tracking of requests for engineering assistance. It contains the Document Manager that tracks all engineering documents and revisions, as well as the creation of Traveler/Router/Planning documents that can be printed during work order creation. The Form/Report Customization features enable you to completely customize all forms and reports in the system without the need of a programmer.

The **Shop Module** allows your technicians to view work order information, clock in and out of work orders, add inventory parts to the work order and view engineering documentation for the specified part.

The **Temperature Monitoring System** is designed to monitor and record temperatures and humidity in your refrigerators/freezers and layup room. Used in conjunction with the T&D RTR-5W wireless thermometers, the system will email and text message notifications of temperatures outside of limits.

The **ARS Notification Module** will send email notifications of inventory below minimum quantities, expiring inventory, open purchase orders and

Internal-Net started with the needs of a one-man shop and over the past five years has developed the technology to support the expanding needs of a growing company. Working with an individual avionics shop, a weld shop, a composite shop and a prop shop, Internal-Net founder Sam Hale designed Aviation Repair Station for the specific needs of these companies and integrated new technologies and processes as the companies grew their business. The belief that a company should not have to conform to the software, but the software should conform to the company's needs has been the driving force behind the creation of Aviation Repair Station 2012.

Easily installable, customizable and user-friendly, ARS 2012 will get your technicians off the computer and on the shop floor doing what they do best. In enforcing the belief that the software should work for you, not the other way around, Internal-Net will never charge you for remote technical support. With just an internet connection we can help you install and customize the software to fit your specific needs. You're an expert in your business, not programming or accounting. Easily customizable reports, rules and forms means you don't need an IT degree to make the software work for your organization. And you'll never have to pay someone with an IT to degree to help you. Internal-Net will schedule a remote support session or web training on customization features at your convenience, and never at a cost. We believe that helping you grow your business through ARS will also help us improve the software – a win/win proposition for everyone.

Not an accountant? You don't need to be. ARS 2012 has a built-in, user friendly Accounting Module. If you are already using QuickBooks, Peachtree or MYOB we can also help you seamlessly integrate ARS 2012 with your existing accounting package. Our goal is to help you streamline every aspect of your business quickly and painlessly.

Aviation Repair Station 2012

Features by Module

ADMINISTRATIVE MODULE:

- ◆ Employees contact information
- ◆ Employee payroll and tax information (state and federal)
- ◆ Employee vacation/sick day accrual and usage
- ◆ **Track employees certifications/licenses/testing - NEW FEATURE**
- ◆ Security protocols administration for all users
- ◆ Assign email notifications
- ◆ Company calendar
- ◆ Customer/Vendor contact information and business type
- ◆ International company information (including currency and international tax information)
- ◆ Credit Hold Status
- ◆ Vendor Information (services performed, ratings, Survey information and Survey Evaluation Forms)
- ◆ Customer/Vendor billing and shipping addresses
- ◆ History of all orders and parts received from Customers/Vendors
- ◆ 8130 Block 13 General Statement generation
- ◆ Invoice creation

INVENTORY/PURCHASING MODULE:

- ◆ Create/Edit/Delete Purchase Orders for inventory items and services (checks ensure vendor is authorized for selected services)
- ◆ **View vendor pricing history per item - NEW FEATURE**
- ◆ View PO by vendor
- ◆ Receive PO:
 - ◇ Line items allow entry of Lot/Batch and expiration date for Shelf Life Control Items
 - ◇ Batch Receive – view items that have been placed on inspection hold
 - ◇ Remove from inspection hold – release into inventory, scrap as a work order or Return to Vendor/Remove from PO
 - ◇ Receiving Sheet creation – indicates that all PO items meet PO requirements
 - ◇ Adhesive Log – track time out of freezer
- ◆ Work with Inventory:
 - ◇ Modify all parts on the master inventory list
 - ◇ Manually create an ISN/SLC

- ◇ Assign services that can be performed on the selected inventory item
- ◇ Add services to the system
- ◇ View inventory levels (Quantity Available, On Order, Out For Service)
- ◇ Split an ISN/SLC (allows for receipt of large quantities to be split into smaller quantities and tracked to the original PO)
- ◆ Item Expiration Calendar
- ◆ Creation and editing of Part Kits
- ◆ Creation and review of inventory requisitions

SALES MODULE:

- ◆ Quote Template for quote creation (Microsoft Word style document for ease of use)
- ◆ Parts and Materials – assigned to selected quote, all parts ever associated with the Part Number quoted
- ◆ History of quotes by Customer
- ◆ Link Quote to Work Order
- ◆ **Contact Relationship Manager - NEW FEATURE**
 - ◇ Sales Task Manager
 - ◇ Complete contact history
 - ◇ Sales Pipeline tracking
 - ◇ Import/Export contact from Outlook, text files
 - ◇ Quote creation automatically added to Sales Pipeline items

QUALITY MODULE:

- ◆ Create/View Request for Engineering Assistance (REA)
- ◆ Document Manager:
 - ◇ Review document revision history
 - ◇ Revision tracking (rules applied, work orders linked to the revision)
 - ◇ View Documentation List
 - ◇ Add/Edit documents in the system (copy/paste, import .pdf, scan documents)
- ◆ Add Form Numbers/Revisions to all printed forms
- ◆ Create Traveler/Router/Planning documents (print at Work Order creation)
- ◆ Work with Check Lists
- ◆ Part Number Manager (Capabilities Lists Tracking System and Rules Engine)
 - ◇ Add/Edit/Delete parts from capabilities list
 - ◇ Print/Create Self Evaluation forms
 - ◇ Add notes to a part number

- ◇ Create/Edit/View Rules Engine (part number modification, documentation links to a specific part number, Traveler/Router/Planning assigned to a specific part number, add inventory to a specific part number (consumables charge)
- ◇ View/Release quarantined parts
- ◆ Forms and Reports customization

WORK ORDER MODULE:

- ◆ Add/Edit discrepancies
- ◆ Creates labels (Using the Dymo 450 label writer)
- ◆ Create/Edit check lists for work orders
- ◆ Print Traveler/Router/Planning
- ◆ Download discrepancy images from a camera and save directly into the work order
- ◆ Scan documents into the work order folder on the server
- ◆ Print work order forms (customized under the Quality Module)
- ◆ Create/Edit "Return to Customer"/Scrap forms
- ◆ Create/Edit/Re-Issue 8130-3
- ◆ Shipping Wizard
- ◆ Burn work order files to CD/DVD
- ◆ View/Edit/Add notes to the part number, work order or the customer

SHOP MODULE:

- ◆ View work order information and discrepancies
- ◆ **Create service PO from Shop WO screen and create/print PO and Packing Slip - NEW FEATURE**
- ◆ Clock in/out of Time Track (tracks hours spent on each work order)
 - ◇ Clocking out will automatically clock employee out of all open time tracks
 - ◇ Allows employees to use vacation time to compensate for a shortage in hours if vacation time is available
- ◆ View Parts/Work Order/Customer notes
- ◆ View Engineering Documentation
- ◆ Add/Return inventory items to a work order
- ◆ Print materials used on the work order
- ◆ Shop Schedule
 - ◇ Gantt Chart of all work orders in the system which shows date in house, expected delivery date, current work order status
